

NOTICE TO READERS OF THIS DOCUMENT:

1. This list represents the specific segments of waterways contained in a proposed revision to Chapter NR 104 of the Wisconsin Administrative Code. Many of the use designations included in the December 2001 draft rule package have been in existence for years and no changes to those designations are proposed. Those waterways are designated by a “No” entry in the last column entitled “Change?” Where a “Yes” entry is included in the last column, the proposed use designation is different than the current use designation.
2. The following acronyms are used to denote the current or proposed use designation of the waterways listed. More information on the definitions of use designations can be found in Chapter NR 102 of the Wisconsin Administrative Code at the following Web Site: <http://www.legis.state.wi.us/rsb/code/nr/nr100.html>.
 - FAL (D) = Fish & Aquatic Life (Default) – This is the **Default** use designation that applies to surface waters when the Department has not completed a formal site visit of a stream segment. The default use designation is used to make decisions for issuing discharge permits unless an alternate use designation is specified in either Ch. NR 102 or Ch. NR 104 of the Wisconsin Administrative Code. The default use designation is equivalent to a *Warm Water Sport Fish Community* classification. Surface waters assigned this use designation support a diverse community of game fish, forage fish, and other aquatic life that are not tolerant to organic pollution. Wastewater discharges to these waterways may not lower the dissolved oxygen content in the water to less than 5 mg/L.
 - LFF = Limited Forage Fish Community – Surface waters assigned this use designation support a community of forage fish and other non-fish aquatic life that are moderately tolerant to organic pollution. Wastewater discharges to these waterways may not lower the dissolved oxygen content in the water to less than 3 mg/L.
 - LAL = Limited Aquatic Life Community – Surface waters assigned this use designation support a community of a small number of forage fish species and other non-fish aquatic life species that are very tolerant to organic pollution. Wastewater discharges to these waterways may not lower the dissolved oxygen content in the water to less than 1 mg/L.
 - WWSF = Warm Water Sport Fish Community – See FAL (D) above.
3. If you have any questions about this information, please call Bob Masnado @ (608) 267-7662 or Laura Bub @ (608) 261-4385
