Sewage	Yes, sewage contains bacteria and viruses that are a hazard to your health. Do not use the water for drinking, bathing or cooking until it has been tested for coliform bacteria and it is confirmed to be safe to drink.	Is your septic system functioning properly? Was there a sudden change in taste, odor or appearance of your water, especially after heavy rainfall? Does your well have shallow or thin-walled casing pipe? Is limestone bedrock close to the ground surface? Is the well close to a sewer pipe or leaking sump?	Send a sample to a laboratory certiied to test for coliform bacteria. Also contact a laboratory certified to test for chloride and nitrate.	Request an inspection of your septic system. Request an inspection of your well and	No license is required for the inspection, although licensed plumbers are the most qualified and can also help correct a problem. No license is required unless the inspection is performed at time of	No	Department of Safety and Professional Services Local Health Department Contact your local zoning administrator DNR website on Property					
				pressure system. Include measurement of well casing depth.	property transfer; although <u>Well Drillers</u> and <u>Pump Installers</u> are the most qualified.		<u>Transfer Well</u> <u>Inspections</u>					
				Check for an unused well that should be filled and sealed	No license is required for the search, unless it is performed at time of property transfer; although <i>Well Drillers</i> and <i>Pump Installers</i> are the most qualified. Only licensed well drillers or pump installers may fill and seal an unused well.	Are not available for a search for unused wells. There are funds for filling and sealing unused wells.
