**Area 6 - Oneida Sandy Plains - Forest Production Area**

Stand 3 (81 Acres) is comprised of well stocked red pine poletimber and small sawtimber. This 61 year old stand has been thinned in the past and is currently averaging 170 sq.ft. of basal area per acre. This stand will receive an improvement thinning to improve stand health and vigor. The best quality red pine will be free thinned, from below, to release those crop trees.

Stand 8 (12 Acres) is comprised of well stocked 67 year old red oak small sawtimber with associated aspen, maple and white pine poletimber. This stand will be thinned to improve the growth and vigor of the remaining oak while releasing advanced natural regeneration. Aesthetics will also be a consideration near Kathan Lake.

Biomass harvesting is not allowed. There is a good network of woods roads and snowmobile trails within the proposed management area. There is good access to County Highway H.
