

April 4, 2023

The Honorable Cory Mason
Mayor's Office
730 Washington Ave
Racine WI 53403

Subject: 2023 Documentation of Reporting Requirements for the City of Racine Diversion of Great Lakes Water

Dear Mayor Mason:

On February 10, 2023, the Department of Natural Resources (the DNR) received the *2022 City of Racine, Wisconsin Report on Water Diversion* (Report).

The DNR issued the diversion approval on April 25, 2018, that requires the City of Racine (City) to submit annual reporting information to the DNR by March 1st of the following year. Thank you for submitting your report. Specifically, Section 6 of the diversion approval requires the City to report the following information for the prior year (2022) to the DNR:

1. The total amount of water sold monthly or quarterly to each category of customer within the approved diversion area.
2. The total monthly sewerage flow to the City of Racine Wastewater Plant from the diversion area.
3. The total consumptive use as specified by the DNR.
4. A summary of the impact of the implemented conservation and efficiency measures required under Wisconsin Administrative Code NR 852.04 and NR 852.05, including quantifiable impacts to water use intensity, as defined in Wisconsin Administrative Code NR 852.03(29).
5. A description of any additional conservation and efficiency measures implemented.

The following paragraphs briefly summarize the DNR's review.

1. *The total amount of water sold within the approved diversion area.* The City sold 13,791,624 gallons of water in the diversion area in 2022 (or an average of 37,785 gallons per day). The City is authorized to divert an average of 7,000,000 gallons per day.
2. *The total monthly sewerage flow to the City of Racine Wastewater Plant from the diversion area.* The City reports that 6,331,748 gallons of water from the diversion area was returned to the City of Racine Wastewater Plant, based on the measurements from the Hwy H meter. The Hwy H meter was recalibrated on February 10, 2022 and July 14, 2022. The City reports that the wastewater return from the Foxconn meters was 5,181,098 gallons.
3. *The total consumptive use.* The Report indicates that the total consumptive use in 2022 was 54% and the consumptive use at the Foxconn facility was 62.4%.
4. *Water use intensity metrics.* The Report includes three water use intensity metrics for 2022:
 - Residential per capita water use: 40 gallons per capita per day (Note the Report includes two different values for residential per capita water use, 40 gallons per capita per day was verified with the City as the correct value and the City will address this error in future reports.)

- the ratio of the maximum day to average day water use: 1.66
 - the average day water use per residential equivalent unit: 254 gallons per day per residential equivalent unit
5. *A summary of the impacts of the implementation of conservation and efficiency measures.* Table 11 of the Report details the City's efforts to implement water conservation and efficiency measures.
6. *A description of any additional conservation and efficiency measures implemented.* Water conservation measures may apply to the entire City, not just the diversion area.
- The City has eliminated the need for water main flushing in the diversion area by recirculating water through the diversion area.

The diversion report provided indicated that water use is still very low in the diversion area. In addition to the reporting requirements above, the City has also submitted documentation demonstrating compliance with Tier 3 water conservation as required by section 6 of the Approval and ch. NR 852, Wis. Admin. Code. The information provided in the Report appears to meet the annual reporting requirements. The City's 2023 Annual Report is to be submitted to the DNR by March 1, 2024.

Please contact Shaili Pfeiffer, shaili.pfeiffer@wisconsin.gov, (608) 219-2216, with any questions regarding your annual reporting.

Sincerely,

Adam Freihoefer
Manager, Water Use Section
Bureau of Drinking Water and Groundwater
